## Spring Boot Project Problem Statement

Get Certified. Get Ahead.

# Grocery Portal

## Description

Build a Java Web Application where admin can manage and view customers and sales details.

## Background of the problem statement:

You are a web developer at a company called Daily Essentials. The company has decided to launch an in-house admin portal where user with admin writes can manage customers and their sales and user with least permissions can see the restricted pages and data. Backend development needs to be developed using Spring Boot and those RestApi's needs to consume in Spring MVC application. The tasks you are responsible for:

- Building RestApi's using Spring Boot
- Building the application using Spring MVC for consuming RestApi's
- Setting and Using MySQL for Database Activities
- Setting up Thymeleaf for managing user views or web pages

## Recommended technologies:

- **Spring Boot:** To build the RestApi's
- **Spring MVC:** To create MVC based Java Web Application
- **MySQL:** To manage database and storing data for the application
- **Thymeleaf:** To create web pages for end users.
